6	0~255	White light brightness adjustment, from dark to light
7	10~255	Program selection
8	0~255	Process running speed adjustment

Maintenance

The LED star curtain is almost free of maintenance. If some of LEDs become dead, you just need to replace the dead ones with the spare LEDs attached in the package.

To replace the LEDs, first of all, unplug the device from the power supply. Unzip the cloth and find the dead LEDs. Hold the dead LED, and remove the clip from front side of the cloth. Change the LED, and put back the clip. Zip the cloth, and connect the device to the power supply.

To ensure the reliability of the LED star curtain, it should be kept clean. Keep it away from oil and other stains.

Specifications

Working Voltage: AC 90V-260V, 50Hz
Fuse: 3A (Power Supply), 10A (Control PCB)
Lamp: 160 pcs φ5 high power LEDs,
Channels: 8 channels
Operation modes: All LEDs on; DMX Control; Sound Activated; Auto run
